1. If any problems exist, such as cloudy water or algae growth, clear these up before performing a winter water analysis and beginning the closing procedures.
2. When the pool is clear, perform a professional water analysis. Balancing parameters are slightly different for winter temperatures than for in season. Balance according to ALEX recommendations for winter closings.
3. Brush sides and vacuum pool. Clean the waterline with Off the Wall. Cleaning the pool surfaces before closing down the pool will help prevent permanent staining.
4. Clean out the skimmer baskets and the hair/lint trap. If the system will not be circulated, remove and store them.
5. Chemically clean the filter using Strip Kwik and/or Kleen It. Strip Kwik is necessary to remove oil and grease from the filter. Kleen It should be used if you have any possibility of scale buildup in the filter. USE ONLY ON FILTER AND PUMP.
6. With the pump running, add 1 gallon of Shock per 5000 gallons of water. Wait one hour.
7. Add at least 10 ounces per 10,000 gallons of water of Algae All 60 into pool. Wait 20 minutes and then add Scale Inhibitor to skimmer basket
8. Circulate 2-4 hours.
9. Turn your Generator Controller to the OFF position. Drain all the water from the pump, filter, and supply and return lines before any freezing conditions occur. Take Generator cell in for the winter.
10. Follow your professional dealer's recommendations for additional winterization instructions for your pool type.

**THE ABOVE INFORMATION IS ONLY A GUIDE AND GENERAL IN NATURE, PROCEDURES WILL VARY DEPENDING UPON INDIVIDUAL POOL SET UP AND EQUIPMENT. REFER TO INSTRUCTION MANUALS FOR DETAILED INFORMATION.**

**WE HAVE A POOL CLOSING SERVICE - CALL FOR DETAILS**
